Standard Operating Procedure

Process:	Removing Flash from Captivate Lessons		
Owner:	Mark Welsh Mark.Welsh@azahcccs.gov	Date:	2/6/2019
		Revision:	1.0

Notes	Action	Action Detail	Screenshot
	1 With the lesson open, select Window from the menu.		
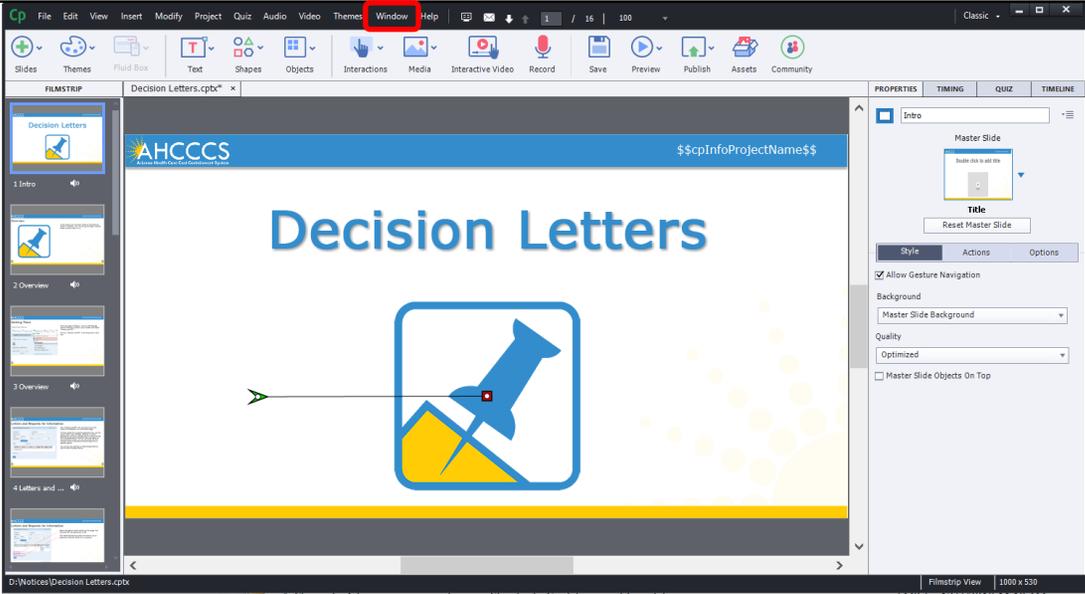

|	2	With the menu option open, select HTML5 Tracker.		
	3	The HTML5 Tracker identifies unsupported flash objects on various pages in the lesson. Page transitions and rollover actions generally do not work with HTML5 and need to be removed.		
	4	In this example, page 2 has a Fade transition applied. Remove the transition.		
	5	The HTML5 Tracker updates and shows the Flash item has been removed.		
	6	Rollover actions also need to be removed and replaced with Advanced Actions that show or hide groups.		
	7	Once the Flash item is removed, the HTML5 Tracker refreshes. When nothing is left, then the Flash has been removed from the lesson. It can be saved, exported and re-uploaded into the LMS.
